Summary

Backend-leaning engineer focused on LLM systems and Python services.

Skills: Python, FastAPI, PostgreSQL, Redis, Docker, GCP, LangGraph, LangChain, pgvector, pytest

Experience

Software Engineer Intern - Built async FastAPI services backed by PostgreSQL and Redis, added caching and unit tests, containerized with Docker and deployed to Cloud Run.

Projects

Agentic Support Triage

Built a multi-agent workflow in LangGraph that retrieves over 50k support docs using pgvector embeddings, calls internal ticketing tools, and maintains conversation state. Added an evaluation harness with regression tests and guardrails. Deployed on GCP Cloud Run with Redis-backed queuing and observability.

RAG Knowledge Assistant

Document Q&A service with a FastAPI backend, chunking pipeline, pgvector vector search, tool calling for live data, and a small evaluation set for answer quality.
